Fax: (850)833-3466

## High School and Technical Center

### Weld Test Bending Machine Specific Source Requirements

Students in NCCER levels are to bend metal v-groove plates to pass for certification. This particular bender requested holds on to the piece of metal until the bend process is through. The purchase of this bender corrects the safety concerns of other bender that presses the metal between two rollers. The Triangle Bender provides a smooth application of force from beginning to end to insure a correct bend every time. Using this as a teaching tool will give our students the ability to familiarize themselves with the same piece of equipment frequently used in the industry that they are seeking employment.

The Triangle Bender also has replaceable parts as well as simple setup and operation. This machine will encounter heavy use in day and night classes. In our professional opinion, and on the recommendation of industry professionals, the bender in question would have to be constructed to at least perform the minimum specifications specified in proper job requirements.

Sincerely,

Jerry Sansom,  
Interim Principal
